

# PRESSURE SYSTEM COMPLIANCE CHECKLIST

Use this Pressure System Compliance Checklist to ensure your facility meets safety, efficiency, and regulatory standards. Follow each step carefully to identify risks, enhance performance, and maintain compliance with essential regulations like PSSR 2000.

**Property:** \_\_\_\_\_ **System:** \_\_\_\_\_ **Date:** \_\_\_\_\_

- ☐ **Ensure a Written Scheme of Examination (WSE):**  
Check that your Written Scheme of Examination covers all key system components and adheres to legal safety standards.
- ☐ **Conduct Regular Inspections:**  
Perform annual and six-monthly checks as specified in the WSE to identify potential safety and efficiency issues.
- ☐ **Inspect for Leaks and Corrosion:**  
Check pipelines, valves, and components regularly for visible leaks, corrosion, or damage.
- ☐ **Calibrate Monitoring Equipment:**  
Ensure pressure gauges, relief valves, and other monitoring systems are functioning correctly.
- ☐ **Service Boilers and Compressors:**  
Maintain systems such as boilers and air compressors to optimise performance and reduce energy waste.
- ☐ **Repair or Replace Aging Components:**  
Address worn or outdated parts proactively to prevent costly failures and downtime.
- ☐ **Keep Records Up-to-Date:**  
Maintain detailed logs of all inspections, maintenance, and repairs for compliance and operational tracking.
- ☐ **Train Staff on Maintenance Protocols:**  
Provide facilities teams with training to identify inefficiencies and respond to system faults effectively.
- ☐ **Upgrade Systems for Energy Efficiency:**  
Retrofit or replace old equipment to align with modern energy and safety standards.
- ☐ **Partner with Industry Experts:**  
Consult specialists like Karsons Consulting for audits, tailored maintenance plans, and compliance assurance.
